

3.x - GetRequestHeaderField

Returns the value previously set for the indicated Request Header Field. The Name argument is case-insensitive but if the indicated Request Header Field has not been set then an error condition will be set.

Syntax

```
Response = HTTP_Services('GetRequestHeaderField', Name)
```

Returns

The value set for the specific HTTP request header field.

Parameters

Parameter	Description
Name	Header Field Name to get. Required.

Remarks

The *Name* argument is case-insensitive but if the indicated Request Header Field has not been set then an error condition will be set.
