3.x - DecodePercentString

Decodes the string so that percent-encoded characters are restored to their regular form. This returns the decoded string.

Syntax

```
Response = HTTP_Services('DecodePercentString', String)
```

Returns

A decoded (i.e., plain text) string.

Parameters

Parameter	Description
String	The string with percent-encoded characters. **Required.**

Remarks

Consider a string that is URL encoded (i.e., URL friendly) such as this:

`project%20%3D%20WEBAPI`

The *DecodePercentString* service will return a plaint text user-friendly string like this:

`project = WEBAPI`
