

3.x - DecodePercentString

Decodes the string so that percent-encoded characters are restored to their regular form. This returns the decoded string.

Syntax

```
Response = HTTP_Services('DecodePercentString', String)
```

Returns

A decoded (i.e., plain text) string.

Parameters

Parameter	Description
String	The string with percent-encoded characters. Required.

Remarks

Consider a string that is URL encoded (i.e., URL friendly) such as this:

```
project%20%3D%20WEBAPI
```

The *DecodePercentString* service will return a plain text user-friendly string like this:

```
project = WEBAPI
```
