3.x - Service_Setup

This is the equivalent of the 3.x - HTTP_Service_Setup insert but it is used by the core SRP FrameWorks utility service modules. 3.x - HTTP_Services, 3.x - HTTP_JSON_Services, and 3.x - HTTP_Authentication_Services rely upon this insert. The reason they do not rely upon 3.x - HTTP_Service_Setup is because they are *not* HTTP service modules in the strictest sense. That is, they do not manage HTTP requests but function as *application* (or *support*) *servi ces. Application services* (whether prefixed with *HTTP* or not) always use the original SRP FrameWorks SOA design.
