

RunWebAPI

Calls the web API procedure for the resource associated to the URL endpoint being requested.

Syntax

```
Response = HTTP_Services('RunWebAPI', Method, Endpoint)
```

Returns

N/A

Parameters

Parameter	Description
Method	The HTTP method for the URL endpoint being requested. Optional
Endpoint	The URL endpoint (not including the Home or API Root) being requested. Optional

Remarks

When this service is called normally the arguments are empty. They only exist for testing a web API without having to run from an actual HTTP request.
