

Close

Description

Close the window. If the class name or window caption is passed in, only the first instance of any window will be closed. The developer will need to call the Close service multiple times until there are no more matching windows.

Syntax

```
rv = Window_Services("Close", Handle, ClassName, CaptionText)
```

Parameters

Parameter	Description
<i>Handle</i>	Handle to the window
<i>ClassName</i>	Class Name to the window. This is ignored if there is a handle.
<i>CaptionText</i>	Caption text of the window. This is ignored if there is a handle or class name.

Version

16.0.21
