Close

Description

Close the window. If the class name or window caption is passed in, only the first instance of any window will be closed. The developer will need to call the Close service multiple times until there are no more matching windows.

Syntax

rv = Window_Services("Close", Handle, ClassName, CaptionText)

Parameters

Parameter	Description
Handle	Handle to the window
ClassName	Class Name to the window. This is ignored if there is a handle.
CaptionText	Caption text of the window. This is ignored if there is a handle or class name.

Version

16.0.21
