

Methods

OLE control methods provide convenient one-time operations to developers. Unlike properties, whose values are persistent over the life of a control, methods represent actions that a control can perform. Often, methods will change the values of other control properties, so be sure to read the Remarks section of each method carefully. The following methods apply to the SRP DatePicker Control:

Method	Description	Version Introduced
EnsureVisible	Brings a date into view.	
EnsureVisibleSelection	Brings the selected date into view.	
ScrollLeft	Scroll's to previous months.	
ScrollRight	Scroll's to subsequent months.	
SetDayStyles	Sets any number of dates and date ranges to the same visual style.	
ShowContextMenu	Displays a context menu at the given mouse point.	3.0.1
