

ShowToolTips

Enables or disables the appearance of tooltips.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ShowToolTips", Value)
```

Values

Value can be any positive or negative whole number:

Default: 1

Remarks

The ShowToolTips property enables or disables the appearance of tooltips. When enabled, tooltips appear when a user hovers over a cell whose contents do not fit in the cell. This occurs regardless of the cells multiline settings.

To disable tooltips, set this property to 0. To enable tooltips to appear only when the table has focus, set this property to 1. To enable tooltips to appear at all times, set this property to 2.

Example

```
// Turn off tooltips
Set_Property(@Window:".OLE_EDITTABLE", "OLE.ShowToolTips", 0)

// Turn on tooltips, but only show them when the table has focus
Set_Property(@Window:".OLE_EDITTABLE", "OLE.ShowToolTips", 1)

// Turn on tooltips, and show them at all times
Set_Property(@Window:".OLE_EDITTABLE", "OLE.ShowToolTips", 2)
```
