

SuppressMouseMoveEvent

Enables or disables the mouse move event.

Usage

```
Set_Property(OLECtrlEntID, "OLE.SuppressMouseMoveEvent", Boolean)
```

Values

[True | False]

Default: True

Remarks

The SuppressMouseMoveEvent property enables or disables the control's OnMouseMove event. This may be necessary for high performance situations. A lot of overhead occurs in firing the OnMouseMove event since there is so much data passed each time. Therefore, the event is suppressed by default. At any time you can set this property to 0 to reactivate the OnMouseMove event.

Example

```
// Activate the OnMouseMove event  
Set_Property(@Window:".OLE_EDITTABLE", "OLE.SuppressMouseMoveEvent", 0)
```
