

HotColor

The splitter's color when the mouse hovers over it.

Added in version 4.1.15

Usage

```
Set_Property(OLECtrlEntID, "OLE.HotColor", ColorFill)
```

Values

ColorFill can be any [Color Fill](#) value.

Default: None

Remarks

The HotColor property establishes the color for the control when the mouse hovers over it. Set this "None", which is the default, if you don't want hover effects.
