

# ItemAlignment

An item's data alignment.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.ItemAlignment[key]", Array)
```

## Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Horizontal	Option	The horizontal alignment of the item's data	Left
<2>	Vertical	Option	The vertical alignment of the item's data	Center

## Indices

Index	Description
key	An item's unique key

## Remarks

The ItemAlignment property determines how the data is justified within the item's rectangle. The property has two fields. The first field aligns the data horizontally and can be set to "Left", "Center", or "Right". The second field aligns the data vertically and can be set to "Top", "Center", or "Bottom".

Left Alignment

Center Alignment

Use the *DefAlignment* property to set the default alignment for new items.

## Example

```
// Right justify the data for the item whose key is "Item1"  
Set_Property(@Window:".OLE_TREE", "OLE.ItemAlignment[Item1]", "Right")  
  
// Center justify all items  
Set_Property(@Window:".OLE_TREE", "OLE.ItemAlignment[All]", "Center")
```
