

OnCheckBoxCheck

Fired when a user checks or unchecks a check box control.

Parameters

Parameter	Description
Control	The key of the check box that was clicked
NewValue	The check box control's new value

Remarks

The OnCheckBoxCheck event is fired when the user clicks on a check box. The key of the clicked control is provided in the first parameter and the second parameter contains the check box's new value.

Example

```
Begin Case
  Case Event EQ "OnCheckBoxCheck"
    ControlKey = Param1
    NewValue = Param2
    Begin Case
      Case ControlKey EQ "CHB_SHOW_PANEL"
        If NewValue then
          GoSub ShowPanel
        end else
          GoSub HidePanel
        end
      Case ControlKey EQ "CHB_ENABLE_CTRL"
        Set_Property(@Window:".MY_CONTROL", "ENABLED", NewValue)
      End Case
    End Case
  End Case
```
