

# OnComboSelChange

Fired when a user selects an item in a combo box control.

## Parameters

| Parameter | Description                       |
|-----------|-----------------------------------|
| Control   | The key of the combo box          |
| NewValue  | The combo box control's new value |

## Remarks

The OnComboSelChange event fires when the user selects a new item from a combo box's drop down list. The first parameter is the unique ID of the combo box control, and the second parameter contains the control's new selected value.

## Example

```
Begin Case
  Case Event EQ "OnComboSelChange"
    ControlKey = Param1
    NewValue = Param2
    Begin Case
      Case ControlKey EQ "COB_FONTFACE"
        Font = Get_Property(@Window:".MY_EDIT_CONTROL", "FONT")
        Font<1, 1, 1> = NewValue
        Set_Property(@Window:".MY_EDIT_CONTROL", "FONT", Font)
      Case ControlKey EQ "COB_FONTSIZE"
        FontSize = NewValue
        GoSub ConvertFontSize
        Font = Get_Property(@Window:".MY_EDIT_CONTROL", "FONT")
        Font<1, 1, 2> = FontSize
        Set_Property(@Window:".MY_EDIT_CONTROL", "FONT", Font)
    End Case
  End Case
End Case
```
