

OnDateFieldChange

Fired when a user selects a date in the date field or types in a new date.

Parameters

Parameter	Description
Control	The key of the date field control
NewValue	The date field control's new value

Remarks

The OnDateFieldChange event fires when the user enters a new date into a date field control. The first parameter is the unique ID of the date field control, and the second parameter contains the control's new value, which will be in OI's internal date format.

Example

```
Begin Case
  Case Event EQ "OnDateFieldChange"
    ControlKey = Param1
    NewValue = Param2
    Begin Case
      Case ControlKey EQ "DTF_STARTDATE"
        GoSub UpdateFilter
      Case ControlKey EQ "DTF_ENDDATE"
        GoSub UpdateFilter
    End Case
  End Case
End Case
```
