

ItemHot

Determines if the user is hovering over an item.

Usage

```
Boolean = Get_Property(OLECtrlEntID, "OLE.ItemHot[key]")
```

Values

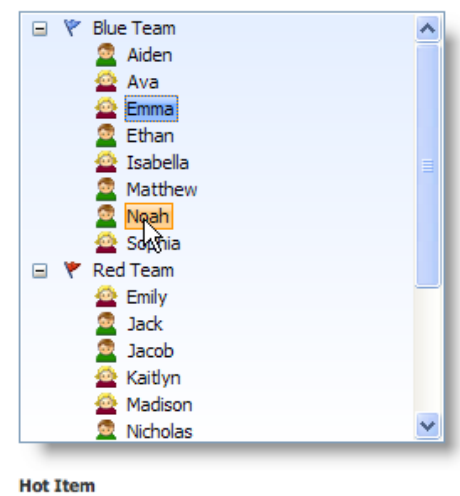

[True | False]

Indices

Index	Description
key	An item's unique key

Remarks

The ItemHot property can be used to determine if an item is hot. If the property is 1, then the user is hovering the mouse cursor over the item. If the property is 0, then the user is either hovering over another item or is not hovering over any items at all.

Example

```
// Determine if the item whose key is "Item1" is hot
IsHot = Get_Property(@Window:".OLE_TREE", "OLE.ItemHot[Item1]")
```
