

ItemHyperlink

Establishes whether or not an item behaves like a hyperlink.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ItemHyperlink[key]", Boolean)
```

Values

[True | False]

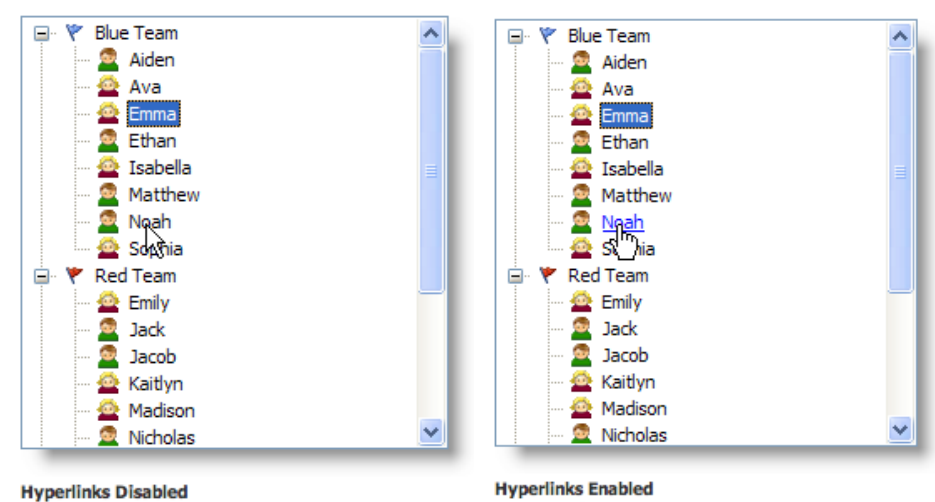

Default: False

Indices

Index	Description
key	An item's unique key

Remarks

The ItemHyperlink property determines whether or not the item will react like a hyperlink when the user hovers over it. When enabled, the cursor changes to a hand and the data is underlined.

Use the [DefHyperlink](#) property to set the default hyperlink setting for new items.

Example

```
// Make the item whose key is "Item1" a hyperlink
Set_Property(@Window:".OLE_TREE", "OLE.ItemHyperlink[Item1]", 1)

// Make all items a hyperlink
Set_Property(@Window:".OLE_TREE", "OLE.ItemHyperlink[All]", 1)
```
