ComboSelPos

A given combo box control's selected index.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ComboSelPos[key]", Value)
```

Values

Value can be any positive integer.

Default: 1

Indices

Index	Description
key	The target combo box's unique control key

Remarks

The ComboSelPos property gets or sets the current selection of a given combo box control. When you defined the combo box during the Init method, you gave it a unique key. You must pass that key in order to get or set its selection. This property behaves just like OI's SELPOS property for combo boxes.

Example

```
// Set my Font Size combo box to the third item
Set_Property(@Window:".OLE_RIBBON", "OLE.ComboSelPos[COB_FONTSIZE]", 3)
```
