

COLSIZE

Description

Used to determine the width of a column within a Run_Report statement.

Syntax

COLUMN **COLSIZE** option

Remarks

The options available are:

Parameter	Value	Description
<i>option</i>	C	The system will calculate the width based on the font size and the dictionary column length.
	Numeric value	The twip number (1440 = 1 inch, 2880 = 2 inches) entered is used as the column width.
	W	The system will wrap the column data within the column. The width of the column will be the based on the dictionary column length.

Example

```
* Calculate the column width based on the font size and column length
CUSTOMER_NAME COLSIZE C

* Set the column size to 2 inches
CUSTOMER_NAME COLSIZE 2880

* Wrap the text within column basing the size on the dictionary's column length
CUSTOMER_NAME COLSIZE W

stmt = "LIST CUSTOMERS CUSTOMER_NAME COLSIZE C CITY COLSIZE 1440"
Run_Report( "",stmt)
```
