## COLSIZE

## Description

Used to determine the width of a column within a Run_Report statement.

## Syntax

## COLUMN COLSIZE option

## Remarks

The options available are:

| Parameter | Value |  |
| :--- | :--- | :--- |
| option | C | Description |
|  | Numeric <br> value | The twip number $(1440=1$ inch, $2880=2$ inches $)$ entered is used as the column width. |
|  | W | The system will wrap the column data within the column. The width of the column will be the based on the dictionary <br> column length. |

## Example

```
* Calculate the column width based on the font size and column length
CUSTOMER_NAME COLSIZE C
* Set the column size to 2 inches
CUSTOMER_NAME COLSIZE 2880
* Wrap the text within column basing the size on the dictionary's column length
CUSTOMER_NAME COLSIZE W
stmt = "LIST CUSTOMERS CUSTOMER_NAME COLSIZE C CITY COLSIZE 1440"
Run_Report("",stmt)
```
