QBFINIT

Description

Initialize the QBF mode.

Syntax

bforward = **QBFINIT** *(ctrlentID, ctrlclassID)*

Parameters

QBFINIT accepts arguments for the following parameters.

Parameter	Description
CtrlentID	Has the format *WindowName.ControlName*, where *WindowName* is the identifier of the window that contains the affected control, and *ControlName* is the identifier of that control. Notice that a period separates the two values.
CtrlclassID	The type of control. Window control is the only valid entry.

Returns

True or false. If false, then program execution returns to the calling procedure. If true, then event processing goes to the next level.
