

# SIZE

## Description

Occurs when a window's size or position has changed.

## Syntax

*bforward* = **SIZE** (*ctrlentID*, *ctrlclassID*, *x*, *y*, *width*, *height*)

## Parameters

SIZE accepts arguments for the following parameters.

Parameter	Description						
<i>CtrlentID</i>	Has the format WindowName.ControlName, where WindowName is the identifier of the window that contains the affected control, and ControlName is the identifier of that control. Notice that a period separates the two values.						
<i>CtrlclassID</i>	The type of control. Possible values are:						
	<table><tr><th>Type</th><th>Description</th></tr><tr><td>ICON</td><td>Icon.</td></tr><tr><td>WINDOW</td><td>Window.</td></tr></table>	Type	Description	ICON	Icon.	WINDOW	Window.
Type	Description						
ICON	Icon.						
WINDOW	Window.						
<i>X</i>	Horizontal distance from origin.						
<i>Y</i>	Vertical distance from origin.						
<i>Width</i>	Width of window.						
<i>Height</i>	Height of window.						

## Returns

True or false. If false, then program execution returns to the calling procedure. If true, then event processing goes to the next level.
