

WINMSG

Description

The WINMSG event is generated for each Windows message that is requested using [QUALIFY_EVENT](#).

Syntax

bForward = **WINMSG** (*CtrlEntID*, *CtrlClassID*, *hWnd*, *Message*, *wParam*, *lParam*)

Parameters

WINMSG accepts the following parameters:

Parameter	Description
HWnd	Window handle that the message was received by
Message	The message ID
Wparam	The first parameter sent with the message
Lparam	The second parameter sent with the message
