

# Alpha Function

## Description

The Alpha function returns true (1) if the expression contains non-numeric characters (including punctuation). If the expression contains a numeric value, false (0) is returned.

## Syntax

value = **Alpha**(*expression*)

[Num\(\)](#)

## Example

```
* B is set to true.  
A = "BASIC+"  
B = Alpha(A)  
  
* B is set to false.  
A = "1992"  
B = Alpha(A)
```
