

# ANSI\_UNICODE Function

## Description

Converts an ANSI string to Unicode string.

## Syntax

```
uniCodeString = ANSI_UNICODE(ansiString, delimiter)
```

## Parameters

The function has the following parameters:

Parameter	Description
ansiString	The ANSI string to convert to Unicode. This string will contain single-byte ANSI characters.
delimiter	The minimum delimiter value to use in the conversion.

## Returns

A string containing two-byte UNICODE characters.
