ATan Function

Description

Generates the trigonometric arc tangent of an angle.

Syntax

arctangent = **ATan**(*expression*)

Parameters

The ATan function has the following parameters.

Parameter	Description
Expression	The expression must be a numeric value that designates the tangent of an angle.

See Also

Cos(), Sin(), Tan()

Example

```
Finding the arc tangent with Atan
TANGENT = 4.1
ARCTANGENT = ATan(TANGENT)
```
