

Collect.IXVals Function

Description

Returns the list of index values for the specified indexed field in the specified file.

Syntax

list = **Collect.IXVals** (filename, fieldname)

Parameters

The Collect.IXVals function has the following parameters:

| Parameter | Description |
|------------------|--|
| <i>Filename</i> | Name of the OpenInsight table containing the index |
| <i>Fieldname</i> | Name of the indexed field. If the field is a cross reference, suffix with _XREF. |

Returns

An @fm delimited list of index values.
