

Control_On Routine

Description

Installs transaction and domain validation controls for a table.

Syntax

Control_On (*tablelist*, *tempflag*)

Parameters

The Control_On routine has the following parameters.

Parameter	Description
<i>Tablelist</i>	A table or list of tables to which to add transaction control.
<i>Tempflag</i>	If true, control features are added only temporarily, until the table is next accessed.

For control features to take effect, the specified tables must already be attached at the time Control_On is invoked.

Example

See Transaction Processing programming example.

```
Attach_Table ("C:\TEMPTABLE", "DATA_INTEGRITY", "", "")
GoSub ErrorHandling
Control_On ("DATA_INTEGRITY", True)
GoSub ErrorHandling
/* processing here against the DATA_INTEGRITY table will be transacted. */
Control_Off("DATA_INTEGRITY", True)
GoSub ErrorHandling
```
