CreateBinaryData Function

Description

This function will create a new variable containing passed data in binary format..

Syntax

retval = **CreateBinaryData**(*varType, variable*)

Parameters

The function has the following parameters:

Parameter	Description
varType	Type of variable you want to insert. This is the same as it is for GetValue, LockVariable.
variable	An existing variable to create binary data from.

See also

GetByteSize(), GetBinaryValue(), PutBinaryValue()

Example

```
declare function CreateBinaryData, GetByteSize
existingVar = "data"
existingSize = GetByteSize( existingVar )
newVar = CreateBinaryData(UBYTE, existingSize ) : existingVar
```
