

Declare Statement

Description

Informs the compiler of external functions and subroutines.

Syntax

Declare Function | Subroutine *name* [, *name* ...]

Parameters

The Declare statement accepts the following parameters.

Parameter	Description
Function or Subroutine	The Function or Subroutine keywords identify name as the <i>name</i> of a function or subroutine.
<i>name</i>	The name of a function or subroutine. Multiple functions or subroutines may be declared by placing a comma between the names.

The Declare statement specifies OpenInsight stored procedures and DLL functions that can be called by a BASIC+ script. The Declare statement is used to both inform the BASIC+ compiler of external references and to help document source code by listing used subroutines and functions.
