

Detach_Table Subroutine

Description

Temporarily prevents access to a single table or list of tables by removing them from the current database. The permanent database definition is not altered.

Syntax

Detach_Table (*tablelist*)

Parameters

The Detach_Table subroutine has the following parameters. Use Get_Status() to check for an error.

Parameter	Description
<i>tablelist</i>	Contains a single table name or a @FM-delimited list of table names to detach.

Example

```
* Detaches the OUTSTANDING table.  
Detach_Table("OUTSTANDING")  
if Get_Status(ErrCodes) then  
    GoSub ErrorHandling  
end  
/* Detaches the CAR_PARTS and CAR_ORDERS tables from the current database. */  
TableList = ""  
TableList <1> = "CAR_PARTS"  
TableList <2> = "CAR_ORDERS"  
Detach_Table(TableList)  
if Get_Status(ErrCodes) then  
    GoSub ErrorHandling  
end
```
