

FTPLIST Function

Description

Retrieve a list of files from an FTP server.

Syntax

```
list = FTPLIST(ftpdomain, user, password, path, error)
```

Parameters

The function has the following parameters:

Parameter	Description
<i>ftpdomain</i>	The domain of the FTP site.
<i>user</i>	A valid username of the FTP site.
<i>password</i>	The password of the user.
<i>path</i>	The location of the files to be listed.
<i>error</i>	The error status returned by the function.

Returns

A field mark (@fm) delimited list of files and file attributes.

Example

```
declare function ftpgetfile, msg, utility

ftpdomain = 'my.ftp.site.com'
user = 'someone'
password = 'a valid password'
path = 'myFtpFiles'

filelist = ftplist(ftpdomain,user,password,path,filename,error)

if filelist then
    swap char(13):char(10) with '|' in filelist
    msg(@window,filelist)
end else
    if error then
        x = msg(@window, 'Contents of Error: ':error)
    end else
        x = msg(@window, 'No files returned')
    end
end
```
