

# GetCurrentDir Subroutine

## Description

Returns the current directory (the directory from which the application is running).

## Syntax

**GetCurrentDir**(*null*, *CurrentDirectory*)

## Parameters

The GetCurrentDir subroutine has the following parameter.

Parameter	Description
<i>null</i>	Pass a null value to the first parameter
<i>CurrentDirectory</i>	Variable which must be initialized. After the call, CurrentDirectory will contain the current directory name.

## Remarks

**Note:** In versions 9.1 and above, it is not necessary to pass a *null* variable as the first parameter. The only parameter necessary is the current directory.

In 9.1 and above:

GetCurrentDir("", CurrentDirectory) and GetCurrentDir(CurrentDirectory) will return the current directory.

In 9.0. and prior:

GetCurrentDir("", CurrentDirectory) will return the current directory. GetCurrentDir(CurrentDirectory) will return the current directory in most situations but not all.

## Example

```
/* after GetCurrentDir() is called, currdir will contain the current directory name. */  
  
declare subroutine GetCurrentDir  
currdir = ''  
call GetCurrentDir('', currdir)
```
