

# Get\_Current\_Event Function

## Description

Retrieves the current event.

## Syntax

```
currEvent = Get_Current_Event()
```

## Parameters

This function does not accept parameters.

## Returns

The name of the current event.

## Example

```
/* On any event place the following code and the message will display the event.  
For example if on the CLICK of a button you were to call the function, it would return "CLICK".  
*/  
declare function Get_Current_Event  
thisEvent = Get_Current_Event()
```
