Get_Dialog_Info Function

Description

Retrieves the information associated with a dialog box

Syntax

status = **Get_Dialog_Info** *(dialogname, owner, inparam, ownparam, outparam)*

Parameters

The Get_Dialog_Info function has the following parameters.

Parameter	Description
dialogname	Specify a valid window identifier.
owner	The identifier for the owner window. Can be null if the dialog box exists.
inparam	Input parameter. Set by a call to Dialog_Box, Create_Dialog (same parameter is passed to the CREATE event.
ownparam	Parameter used by the dialog box itself. Can be set only by a call to Set_Dialog_Info.
outparam	Parameter used to pass result to calling process. Set by End_Dialog.

Any delimiters except for @RM can be used as parameters. Status is true if block of parameters exists, otherwise false.
