

Pointer

A pointer attached to one side of a custom themed popup.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Pointer", OptionValue)
```

Values

OptionValue can be set to one of the following valid options:

Value	Abbr	Description
None	N	No pointer.
Left	L	Point on the left side of the popup.
Top	T	Point on the top side of the popup.
Right	R	Point on the right side of the popup.
Bottom	B	Point on the bottom side of the popup.

Default: None

Remarks

The Pointer property defines a pointer on one side of a custom themed popup. This only works for popups whose [Theme](#) property is set to "Custom". Adding a pointer allows you to make the popup appear like a callout box that points to a particular control.

Example

```
// set a top pointer
Set_Property(@Window:".OLE_POPUP", "OLE.Pointer", "Top")
```
