

# GetMenu Function

## Description

Return's the handle of a window's menu, if any. OpenInSight does not return the [HANDLE property](#) for a menu entity. Use `GetMenu()` instead.

## Syntax

*menu\_handle* = **GetMenu** (*hWnd*)

## Parameter

The `GetMenu` function has the following parameter:

Parameter	Description
<i>hWnd</i>	The window's handle. Use the <a href="#">Get_Property(@window, 'HANDLE')</a> call to read the window's handle.

## Returns

If `menu_handle` returns a positive number, this is the window's menu handle. If `menu_handle` returns 0, the window has no menu.

## See Also

[HANDLE property](#), [DTHANDLE property](#)

## Example

```
/* if the current window contains a menu, hMenu will contain the handle after the GetMenu() call */  
  
declare function GetMenu  
hwnd = Get_Property(@window, 'HANDLE')  
hMenu = GetMenu(hwnd)
```
