

# GetNetworkType Subroutine

## Description

Returns the current network driver type of the OpenInsight System.

## Syntax

**GetNetworkType** (*NetworkType*,*NetworkTypeLen*)

## Parameters

Parameter	Description
<i>NetworkType</i>	A null string. This string should be large enough to contain the return value. If the string is not large enough the driver type will be truncated on return. This parameter will contain the return value after execution of the subroutine.
<i>NetworkTypeLen</i>	The length of the string to be passed.

## Returns

A null terminated string of the current network driver in use.

## Example

```
/* after the call to GetNetworkType(), NetworkType will be assigned the name of the current driver */

declare subroutine GetNetworkType

NetworkType = str(\00\,99)                /* a null string
GetNetworkType(NetworkType, len(NetworkType)) /* execute the function
NetworkType = NetworkType[1,\00\]         /* NetworkType will contain the driver.
```
