

Reference

A detailed reference guide for all SRP FrameWorks application entities: stored procedures, forms, and other user interface components. SRP FrameWorks ships with a library of over 150 essential application entities. The majority of these are stored procedures. Virtually all entities come with source code so you can customize them to handle your specific needs.

Item	Description
Commands	An alphabetical list of the Commands that come pre-loaded with SRP Frameworks.
Services	An alphabetical list of all services used in SRP Frameworks. Each individual service is then described in full detail on their individual page.
Events	List of active and depreciated window events found in SRP Frameworks. Also displays the last updated date for each event.
Stored Procedures	An alphabetical list of all other SRP Frameworks stored procedures. Included in each reference is the procedure's parameters, return value, special remarks and examples.
Forms	A complete list of all forms: databound, dialog boxes, and toolbars. These are grouped by purpose.
Additional Components	Additional components provided with SRP Frameworks. These are primarily user interface components such as messages and popups. All reports are documented here as well.
Development Standards	An article that details the current development standards which are used within SRP Frameworks.
