

DisplayMobileRepository Method

Syntax

```
SRP_Mobile_Repository(CtrlEntID, 'DisplayMobileRepository', EntityList, Path, DisableRefresh)
```

Returns

Parameters	Description
EntityList	@FM delimited list of repository entities to use. If empty then the current cache is used (see RefreshLocalRepository)
Path	Directory path where the mobile repository is located.
DisableRefresh	Boolean flag to determine if a visual refresh should be disabled. This would be used if another method is used to refine the list of entities (e.g. FilterLocalRepository.) Default value is False.

Remarks

Only used internally by the SRP_Mobile_Repository routine to interact with the GUI utility.

Examples

```
// Load the GUI utility with a list of entities using the 'App' view style. Do not refresh
// the view just yet since another process will filter the entities first
SRP_Mobile_Repository(CtrlEntId, 'DisplayLocalRepository', EntityList, 'App', Yes$)
```
