

DisplayLocalRepository Method

Syntax

```
SRP_Mobile_Repository(CtrlEntID, 'DisplayLocalRepository', EntityList, ViewStyle, DisableRefresh)
```

Returns

| Parameter | Description |
|----------------|---|
| EntityList | @FM delimited list of repository entities to use. If empty then the current cache is used (see RefreshLocalRepository) |
| ViewStyle | Visual format for the repository entities. Currently only one format, 'App', is supported. |
| DisableRefresh | Boolean flag to determine if a visual refresh should be disabled. This would be used if another method is used to refine the list of entities (e.g. FilterLocalRepository.) Default value is False. |

Remarks

Only used internally by the SRP_Mobile_Repository routine to interact with the GUI utility.

Examples

```
// Load the GUI utility with a list of entities using the 'App' view style. Do not refresh
// the view just yet since another process will filter the entities first
SRP_Mobile_Repository(CtrlEntId, 'DisplayLocalRepository', EntityList, 'App', Yes$)
```
