

SRP_Get_Window_Rect

Get's the window's (or control's) SIZE property in relation to the screen.

Syntax

```
Result = SRP_Get_Window_Rect(CtrlName)
```

Returns

The window's or control's SIZE property in relation to the screen. This is useful when the the absolute position of a control is needed rather than the relative position to the parent. The return result uses the same format as the OpenInsight SIZE property.

Parameters

Parameter	Description
CtrlName	The fully qualified name of the control.

Example

```
* Return the dimensions of the edit line control
AbsoluteSize = SRP_Get_Window_Rect(@Window : ".EDITLINE")
```
