

Inet_Repos Function

Description

Retrieves an HTML document from the repository.

Syntax

return = **Inet_Repos**(*Request*)

Parameters

The **Inet_Repos()** function has the following parameters:

Parameters	Description	
Request [in]	HTTP-request that carries the following parameters:	
	Parameters	Description
	DOC_ID	Repository name of a document to retrieve.
	DOC_TYPE	Repository TYPE*CLASS of a document to retrieve (defaulted to DOC*HTML). Optional, if an HTML document is desired.
return	[out] Repository document in HTML format (as a result of the GETHTML method execution)	

Returns

Repository document in HTML format, suitable for displaying in a Web browser window.

Example

To display an HTML document, registered in the Repository as **HRM**, which points to an HTML page, enter a URL similar to the following:

```
http://127.0.0.1/cgi-bin/oecgi.exe/INET_REPOS?DOC_ID=HRM
```
