

List_Index_Detailed Routine

Description

Returns detailed information about indexes for a specified table or for all tables.

Syntax

List_Index_Detailed (*tablename*)

Parameters

The List_Index routine has the following parameter.

Parameter	Description
<i>Tablename</i>	Specifies the table name to find index information for. If null, then indexing information is returned for all attached tables.

Returns

A row for each column specified in returncolumnlist. Each return row contains the following:

(table, column, indexes)

Return column	Value
<i>Table</i>	Table name.
<i>Column</i>	Column name.
<i>Indexes</i>	"Xref" for cross reference, "Btree" for BTree, "Relational" for relational..

Example

```
run List_Index_Detailed "CUSTOMERS"
produces:
Table Name      , Column Name      , Index Information
-----
CUSTOMERS      , CUSTOMER_NAME    , Xref
CUSTOMERS      , CUSTOMER_NAME_XREF , Btree
CUSTOMERS      , FNAME            , Btree
CUSTOMERS      , LNAME            , Btree
CUSTOMERS      , STATE            , Btree Xref
CUSTOMERS      , STATE_XREF        , Btree
If tablename is omitted, a row is produced for each indexed column.
```
