

List_Tables Routine

Description

Returns the attached tables in the current database.

Syntax

List_Tables(*returncolumnlist, sortlist, booleanflaglist*)

Parameters

The List_Tables routine has the following parameters.

Parameter	Description
<i>returncolumnlist</i>	Specify a column name or list of columns names to return. Column names are defined in DICT.SYSTABLES. If returncolumnlist is null, the column TABLE_NAME is returned by default. Valid DICT.SYSTABLES column names are: DATABASE_ID FS_LIST HANDLE TABLE_NAME (default) VOLUME_NAME System tables are not included. (Refer to booleanflaglist, below.)
<i>sortlist</i>	Specifies a column name or list of column names to sort by. If null, no sorting takes place.
<i>booleanflaglist</i>	If booleanflaglist is true (1), then the system tables are included in the list of tables.

In BASIC+, the list of tables is stored in the system global variable @tables. Specific table information can be selected and/or read from the SYSTABLES table.
