

# Max Function

## Description

Returns the maximum value of two passed arguments.

## Syntax

*value* = **Max**(*arg1*, *arg2*)

## Parameters

arg1 and arg2 are required and must be assigned. A null value is equivalent to a zero in the evaluation.

## Returns

The maximum value of the two arguments.

## See Also

[Min\(\) function](#)

## Example

The following example returns 6 in retval.

```
retval = Min(-5, 6)
```
