## Max Function

## Description

Returns the maximum value of two passed arguments.

## Syntax

value $=\mathbf{M a x}(\arg 1, \arg 2)$

## Parameters

arg1 and arg2 are required and must be assigned. A null value is equivalent to a zero in the evaluation.
Returns
The maximum value of the two arguments.
See Also
Min() function

## Example

The following example returns 6 in retval.

```
retval = Min(-5, 6)
```
