

Print_SetHeader Function

Description

Sets the page header print and font.

Syntax

status = **Print_SetHeader** (*headertext*, *font*)

Parameters

The Print_SetHeader function has the following parameters:

Parameter	Description
<i>headertext</i>	Text for the heading.
<i>Font</i>	Structure of the font as returned by Utility ("CHOOSEFONT").

Returns

True for successful execution or **False** for failure.

Example

```
/* Sets the print header to number each page consecutively and put the date on each page. */
FontStruct = Utility("CHOOSEFONT", @Window)
Print_SetHeader('This is the Header: P.\PAGE':@FM: |
"Date: 8/3/95", FontStruct)
Note: In order for lines of text to wrap, each line must be delimited by an @FM.
```
