

Recompile_Proc Subroutine

Description

Recompiles one or more specified stored procedures.

Syntax

Recompile_Proc (*procnamelist*)

Parameters

The Recompile_Proc subroutine has the following parameter.

Parameter	Description
<i>procnamelist</i>	Specifies a name or list of names of stored procedures to recompile.

Note: *Stored procedures can also be recompiled using the [Repository\('COMPILE'\)](#) function, or the [RTP5 subroutine](#).*

Note: *[\\$INSERT](#) records in a stored procedure are not recompiled by [Recompile_Proc](#). However, they are recompiled by the [Repository\('COMPILE'\)](#) function.*

See Also

[Repository\('COMPILE'\)](#), [Repository\("TCOMPILE"\)](#), [RTP5 subroutine](#)

Example

```
* Recompiles the QUICK_REPORT stored procedure.
Recompile_Proc("QUICK_REPORT")
If Get_Status(ErrCodes) Then
  GoSub ErrorHandler
End
```
