

The Semicolon operator

Description

Use the semicolon to join separate statements on the same line of code.

Syntax

statement ; statement

Parameters

The semicolon operator has the following parameters.

Parameter	Description
<i>Statement</i>	Any complete BASIC+ statement.

Any statement can precede or follow the semicolon. The comment operators * and ! at the beginning of a line, however, will mark the entire line as a comment.

Example

```
variable1 = 10 ; variable2 = 20
```
